Hi Ron,

We had two comments on the figures you provided:

1. Present the percent reduction figures in the FFS Report for the main stem and each tributary of the Creek.
2. Include a robust discussion of each figure in the FFS Report.

Thanks,

For the remaining action items, attached are examples of figures showing incremental benefit in the form of SWAC plotted against CSO % reduction/volume. In addition, we took a shot at editing the risk assessment to extensively quote the approved BERA. If we need to have further discussion on that language maybe Tues or Thursday after our already scheduled meeting would work. Otherwise we can find another time.

Thanks, have a great weekend.

Here is the comment response matrix. Let us know if you need any more detail on any of the items. The action items below will be provided Friday. There were two minor additional things:

- 1) I believe comment 49 was also going to be re-assessed by EPA.
- 2) One other item the City legal team wanted to discuss on 7/30 was the applicability of the CWA as an ARAR.

Thanks
